EDUCATION

Master of Science in Information Technology — Gold Medalist

Arizona State University- Tempe, Arizona.

May 2023

GPA: 4.0/4.0

Bachelor of Technology in Computer Science

October 2020

Gayatri Vidya Parishad School of Engineering, Visakhapatnam, India.

GPA: 7.37/10

TECHNICAL SKILLS

- **Programming Languages:** Java (Core Java, Multithreading, Collections, Concurrency), Python, JavaScript, SQL, PL/SQL, Dart
- **Frameworks & Technologies:** Spring Boot, Spring Core, Spring MVC, Spring REST, Spring Security, Spring AOP, Spring ORM, Spring Transaction, Spring IOC, Spring Data JPA, Hibernate, Struts MVC, J2EE, JSP, React.js, Angular, AngularJS, Node.js, Django, Flutter, Bootstrap, AJAX, RESTful APIs, SOAP Web Services
- **Cloud Platforms & DevOps:** AWS (EC2, Lambda, S3, SQS, Athena, Redshift, EMR, Glue, Glacier, IAM), GCP (GCE, Firebase, Cloud SQL, Google Cloud Endpoints), Microsoft Azure (Azure Functions, Azure DevOps, Blob Storage, Azure SQL, Resource Groups, Power Automate), Docker, Kubernetes, Jenkins, GitHub CI/CD
- **Data & Messaging:** Apache NiFi, Airflow, ETL Pipelines, Vortex Messaging
- **Databases:** MySQL, PostgreSQL, Oracle, SQL Server, DB2, MongoDB, SQLite
- **Testing & Tools:** JUnit, Jest, Selenium, Appium, SOAP UI, Maven, Git, Eclipse IDE, Visual Studio Code
- **Methodologies & OS:** Agile Scrum, SDLC, Test-Driven Development (TDD), Linux

PROFESSIONAL EXPERIENCE

Software Engineer | T-Mobile - Dallas, Texas.

December 2025 – Present

- Performed manual and automated mobile testing using Appium across services, reducing QA cycles by **45%**.
- Implemented unit and integration testing with Jest and Selenium, reducing bugs by **30%**. Improved AWS ETL pipeline performance by **40%** using Athena queries, Glue catalog, S3, and Redshift operations.
- Leveraged Java 8 features including Streams, Lambda expressions, Functional Interfaces, enhanced Collections, Date/Time API, and type annotations to write clean, efficient, and modern Java code.
- Developed dynamic user interfaces using JSP, HTML, CSS, and JavaScript, handling UI manipulation, validations, customization, and user-friendly error messaging.
- Used jQuery to enhance client-side interactivity by integrating frontend components with JavaScript functions, improving responsiveness and usability.
- Implemented the application using MVC architecture and DAO design patterns, ensuring clear separation of concerns, code reusability, and maintainability.
- Contributed to the presentation layer using JSP and Spring MVC, building structured and scalable web applications.
- Developed helper and utility classes to enable efficient data exchange across MVC layers, extensively utilizing Spring IoC, AOP, Spring MVC, Spring Data, and Spring Web Services within Spring Boot-based applications.
- Designed and implemented XML-based web services for data exchange between multiple service providers and developed RESTful web services using JAX-RS (Jersey) and REST annotations.
- Integrated Hibernate with Spring as the data abstraction layer, using dependency injection and annotations to persist data into Oracle databases.
- Developed Hibernate-mapped Java entities and created complex queries using Hibernate Query Language (HQL) to support business logic.
- Implemented asynchronous messaging using JMS with ActiveMQ, enabling reliable agent-server communication.
- Built responsive UI components using Bootstrap and AngularJS, including services, controllers, and directives, and consumed RESTful APIs for frontend data integration.

Java Developer | First Tech Fedral Credit Union - Remote, USA.

July 2024 - October 2025

- Designed and implemented scalable Java applications using Spring Boot, Spring IOC, and RESTful APIs for microservices architecture.
- Led Agile sprints for Java applications, automating with Continuous Integration tools like Jenkins, GitHub.
- Implemented TDD principles and automated testing with JUnit, Selenium; accelerating release cycles by **30%**.
- Integrated Vortex asynchronous messaging, strengthening microservice stability, performance, and event handling.
- Integrated RESTful APIs using Google Cloud Endpoints to enable seamless communication between microservices.
- Implemented various standard J2EE design patterns and applied best practices to design scalable, maintainable, and reusable enterprise applications aligned with business requirements.
- Designed, developed, and enhanced the service layer by analysing evolving business needs, modifying existing components, and ensuring seamless integration with downstream systems.

- Performed extensive core Java development across multiple application components, leveraging multithreading, collections, and concurrency concepts, along with Spring Core and Spring Beans for efficient component management.
- Developed rich and responsive user interface components for multiple web pages using HTML5, CSS3, JavaScript, jQuery, and ReactJS, ensuring cross-browser compatibility and improved user experience.
- Built highly interactive UIs using ReactJS by implementing components, forms, events, routing, Redux, and Flux, utilizing one-way data flow, Virtual DOM, JSX, and React Native concepts to improve performance and maintainability.
- Configured XML Firewalls and Web Service Proxies, along with required supporting objects, to enforce security, control service access, and enable secure communication between applications.
- Developed backend services using JSP and Spring MVC, leveraging the Spring 5.0 framework to manage business-layer components and JDBC for reliable and efficient database transactions.
- Designed and implemented Spring Controller classes using Spring MVC, Spring AOP, Spring Boot, and Spring Batch, while managing authentication and authorization using Spring Security.
- Developed and enhanced RESTful web services within a microservices architecture using Spring and Spring Boot, enabling scalable API development and seamless system integration.
- Created and configured Spring Controller classes and mapped them to corresponding JSP pages through spring-config.xml, ensuring proper request handling and view resolution.
- Developed Hibernate-based ORM mappings, mapping Java classes to database tables and creating optimized queries using Hibernate Query Language (HQL).
- Built multiple backend services and controllers for a consolidated client portal using Groovy and Grails, improving modularity and speeding up feature development.
- Created Hibernate mapping and configuration files using Spring modules such as Spring MVC and Spring Web, ensuring smooth object-relational integration.
- Utilized Hibernate templates to integrate Spring DAO business objects with database tables, improving consistency and simplifying data-access logic.
- Designed and optimized MongoDB schemas, implementing indexing and replication strategies to enhance performance, availability, and scalability of NoSQL data stores.
- Led the migration of databases from traditional SQL databases such as Oracle and SQL Server to MongoDB, ensuring data integrity and minimal downtime.
- Performed administration and management of AWS services including CLI, EC2, VPC, S3, ELB, Glacier, Route 53, CloudTrail, IAM, and Trusted Advisor, supporting secure and scalable cloud infrastructure.

Software Engineer | IT Partner - Tempe, USA.

October 2023 - June 2024

- Led a team to develop Python scripts to automate the recording feature in Microsoft Teams using Power Automate.
- Utilized Azure Functions, Azure DevOps pipelines for scalable automation, improving deployment time by **98%**.
- Utilized core Java features such as multithreading, collections framework, and exception handling to build robust, scalable, and high-performance application components.
- Designed, developed, and maintained responsive web pages using HTML5, CSS3, JavaScript, jQuery, and AJAX, incorporating XML-based controls to enhance interactivity and cross-browser compatibility.
- Implemented applications using the Spring Framework based on the MVC design pattern, ensuring clear separation of concerns across presentation, business, and persistence layers.
- Configured Spring controllers using Inversion of Control (IOC) and Dependency Injection, enabling loose coupling and improved testability of application components.
- Set up the Spring Framework for the complete business logic layer by defining beans and dependencies within Spring Context configuration files.
- Developed scalable RESTful web services in a microservices architecture using Spring and Spring Boot, enabling efficient communication between distributed systems.
- Designed and implemented REST APIs using Java and Spring Boot, leveraging Postman for local development, testing, and validation of API endpoints.

Software Engineer | Nike - Remote, USA

March 2022 – April 2023

- Designed end-to-end full-stack web applications using JavaScript, React.js, Spring Boot, and Spring Data JPA.
- Built and optimized ETL pipelines using Apache Ni-Fi and GCP, reducing data processing time to under **5 seconds** for **99%** of transactions and improving supply chain efficiency by decreasing order fulfillment delays by **20%**.
- Developed robust backend services and full-stack web applications using Java 8 and J2EE concepts, delivering scalable and maintainable solutions aligned with business requirements.
- Extensively utilized Java collection frameworks such as ArrayList, HashMap, Hashtable, and HashSet to efficiently manage in-memory data and improve application performance.
- Designed and implemented customer registration and login modules using HTML5, Bootstrap, Servlets, JavaScript, and jQuery, simplifying client-side scripting while ensuring cross-browser compatibility.

- Built end-to-end applications using Java, Spring Boot, Hibernate, HTML5, CSS, Bootstrap, React.js, and Node.js, enabling seamless interaction between frontend and backend components.
- Developed and maintained modern single-page applications (SPAs) using React.js and Redux, improving state management and application scalability.
- Implemented reusable React components and hooks to enhance code maintainability, optimize rendering performance, and promote component reusability.
- Utilized React Router to manage client-side routing, enabling smooth navigation and improved overall user experience.
- Integrated and consumed RESTful APIs to fetch, process, and display data dynamically within web applications.
- Leveraged the Spring ecosystem including Spring Core, Spring MVC, Spring REST, Spring Boot, Spring Transaction, Spring AOP, Spring ORM, and Spring Security to develop secure and scalable applications.

Software Engineer | Sha Associates - Visakhapatnam, India.

August 2019 - June 2021

- Launched a real-time fitness recognition application using Node.js, Kotlin, and Swift, supporting over **500** users with launch time under **2 seconds** for **97%** of users on both Android and iOS platforms.
- Optimized SQLite/DBMS and ORM technologies, enhancing data retrieval speed, reducing memory usage by **25%**, integrating analytics to track user progress and ensuring real-time tracking of activities and metrics.
- Extensive experience across analysis, design, development, and implementation of large-scale, secure Internet and Intranet applications using Java/J2EE technologies, following Agile development practices to deliver production-ready features, enhancements, and bug fixes.
- Implemented Core Java concepts including multithreading, collections, threading, and I/O APIs to build efficient batch processing jobs, handle concurrent access, and support high-performance application requirements.
- Designed and developed user interface screens using Struts MVC, JSP, HTML, CSS3, JavaScript, jQuery, and Bootstrap, enabling secure login functionality and smooth operational workflows within the application.
- Worked extensively with relational databases such as MySQL, Oracle, DB2, PostgreSQL, and SQL Server, developing and enhancing applications using stored procedures, complex SQL queries, and database-driven features.
- Utilized Hibernate ORM as the persistence layer to manage object-relational mapping, transaction management, and database interactions, configuring hibernate.cfg.xml and hibernate.hbm.xml files to support connection pooling and scalable data access.
- Defined and implemented asynchronous data transfer mechanisms using RESTful web services over HTTP, and validated service responses using XML and JSON formats to ensure reliable system integration.
- Developed a web-based email client using the JavaMail API, enabling automated email communication directly from the application.
- Used JUnit extensively to create repeatable unit test cases, ensuring code quality, reliability, and adherence to development standards.
- Leveraged Eclipse IDE for application development and debugging, managed source and version control using Git, and deployed applications to the Oracle WebLogic Application Server.

PROJECTS

Smart Healthcare Appointment and EHR System:

August 2022 – December 2022

- Engineered a full-stack healthcare platform using Java, Spring Boot, MongoDB, enabling secure patient-doctor scheduling and real-time EHR access with **85%** uptime under high user load.
- Deployed RESTful microservices with JWT-based role authentication, dynamic dashboards via React.js, and seamless data flow—boosting patient engagement by **35%** and streamlining clinical workflows.

Video Transcription as a Service using AWS Transcribe:

January 2022 – April 2022

- Built a full-stack video transcription service using AWS Transcribe, Java, MongoDB, Spring Boot, and React.js.
- Leveraged AWS S3, SQS, and EC2 for scalable architecture, ensuring **99.9%** reliability and fast transcript delivery.

Shopping App with Hash & Salt Function using Flutter with Dart:

August 2021 – December 2021

- Implemented hashing and salting with unique random data to secure user passwords in Flutter-based shopping app.
- Developed Cryptographic Algorithms for User Authentication when clients login or sign up, with **100%** verification.

CERTIFICATIONS & AWARDS

- Flutter and Dart - The Complete Guide [2025 Edition] - Udemy - [Link](#)
- Awarded **Passed with Distinction award** and **Gold Medal** for achieving highest CGPA for Master's degree in Information Technology at Arizona State University.
